INVITATION

WATenERgy CYCLE Brussels e-workshop

On behalf of the Municipal Water and Sewerage Company of Larissa, we have the honour to invite you to attend to the WATenERgy CYCLE Brussels workshop - Interreg Balkan Mediterranean project, which will take place on line on 16th of October 2020

WATenERgy CYCLE project (<https://watenergycycle.eu/>) aims at developing a common methodological approach towards efficient & effective transnational water & energy resources management. Our common challenge is to increase the current low level of innovative technologies use along the water supply chain, from the water's source to its end-users and back to the environment, along with the increase in climate change resilience.

A number of rational activities (networking, pilot actions, partner's exchanges & meetings, training workshops) in the fields of innovation & environment are the main outputs. Our approach is a synergy of (8) Partners (local, regional and national authorities) from (3) EU MS (Greece, Cyprus & Bulgaria) & (2) IPA countries (Albania and North Macedonia).

The partnership is a well harmonized set of stakeholders from the entire Balkan Mediterranean area, primarily focused to the main actors in the field: 5 Water Utilities, 2 Associations (ERDF), 1 Research Institution and 2 Observers (EU & IPA level). covered a considerable part of the Balkan Mediterranean territory, aims in promoting a holistic approach, raising a number of shared technical challenges, due to common river basin management, WFD implementation strategy & climate change vulnerability.

The **European Association of National Associations of Water Utilities (EurEau)** contributes to the establishment of the institutional framework that will allow the formulation of the project's

communication strategy's main components, namely the objectives, the goals, the targeted audiences, the messages and the expected impact.

“WATenERgy CYCLE Brussels workshop” is organized virtually as part of our project, where EU politicians and officers, invited by the Municipal Water and Sewerage Company of Larissa, will be informed about the progress of the project and the proposed water-energy efficient management tools, methodologies and innovative technologies, in alignment with EU policies.

Your participation will be a great honour for us.

The working language of the workshop is English and no translation will be provided. You will soon receive the workshop agenda.

We are looking forward to see you on line.

Sincerely yours

Mr Dimitrios Savvoriginakis

General Director

Municipal Water and Sewerage Company of Larissa
